

Physical Science Assessment

Question 1: Multiple Choice

Look at the picture of sugar in water.
Even though the sugar seems to “disappear,” it is still there.

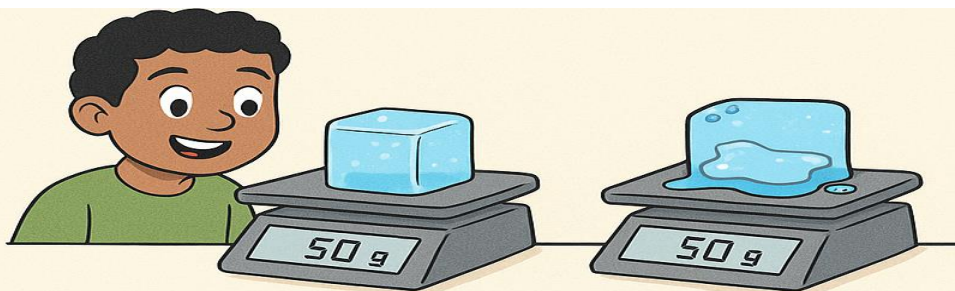

Which answer best explains why?

- a) Sugar is destroyed when it touches water
- b) Sugar breaks into particles too small to be seen
- c) The water eats the sugar
- d) The sugar turns into air

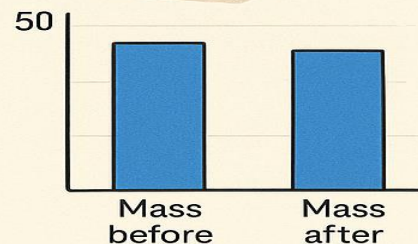

Question 2: Multiple Choice

A student measured an ice cube before and after it was melted:

What does this show?

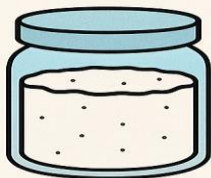

- a) Matter is made of tiny particles
- b) Matter weighs less as it changes
- c) The weight of matter is conserved
- d) The weight of matter disappears

Question 3: Multiple Choice

You are given three mystery powders.
Test their properties:

Powder	Color	Dissolves in water?	Hardness
A	White	Yes	Soft
B	Brown	No	Hard
C	Gray	No	Hard

A

B

C

Which powder is most likely metal?

- a) A
- b) B
- c) C
- d) None

Question 4: Investigation

You mix baking soda and vinegar. You observe bubbles and gas forming.

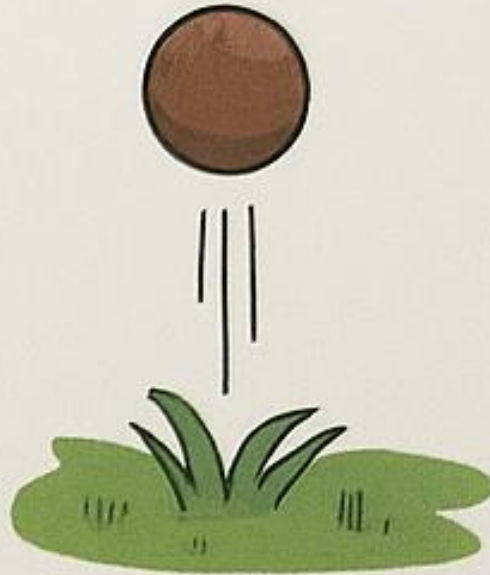

Did a new substance form?

Write your answer and explain using information that you know.

Question 5: Multiple Choice

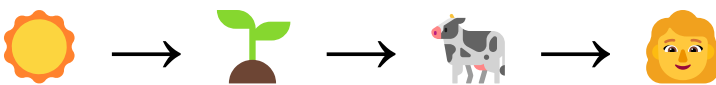

What force pulls the ball to the ground?

- a) magnetism
- b) gravity
- c) friction
- d) electricity

Question 6: Short Answer

Look at the food chain picture:

The sun gives energy to the grass. The cow eats the grass. The human eats the cow.

Where did the energy in the human's food originally come from?
